# ABCHA 8200R NV

## Replenisher for developer ABCHA 8200 NV

**Replenisher formulated, developed and designed to keep all properties of ABCHA 8200 NV developer. ABCHA 8200R NV reduces the use of chemistry and allows recycling less quantity of product.**

### Properties

- **DURABILITY:** Its specific formulation permits high productivity in square meters developed.
- **CLEANING:** Its dissolution capability reduces the accumulation of emulsion in the filters, rollers and bath tank, keeping them cleaner.
- **Non-aggressive** to the anodizing layer of the plates.
- Buffered agents to minimize the aggression to the image area.
- It contains corrosion inhibitors.
- Low replenishment rate, reduces the consumption and recycling.
- Conductivity: 89 mS/cm.

### How to use

|                     |                           |
|---------------------|---------------------------|
| Replenishment rate  | 50 – 70 ml/m <sup>2</sup> |
| Anti-ox Standby ON  | 40 – 60 ml/h              |
| Anti-ox Standby OFF | 40 – 60 ml/h              |

### Considerations

Initial bath's charge must be always with developer ABCHA 8200 NV.

Make sure about the correct replenishment dose.

### Packaging

20 liters | 1000 liters | Other packaging available under request.
